IEEE Research Papers Reference

- Smart Campus Management System -IEEE Xplore
- QR Code Based Gate Pass System - IEEE Conference Paper
- Role-Based Access Control in Web Applications – IEEE
- Secure Digital Permission Systems using Cloud
IEEE

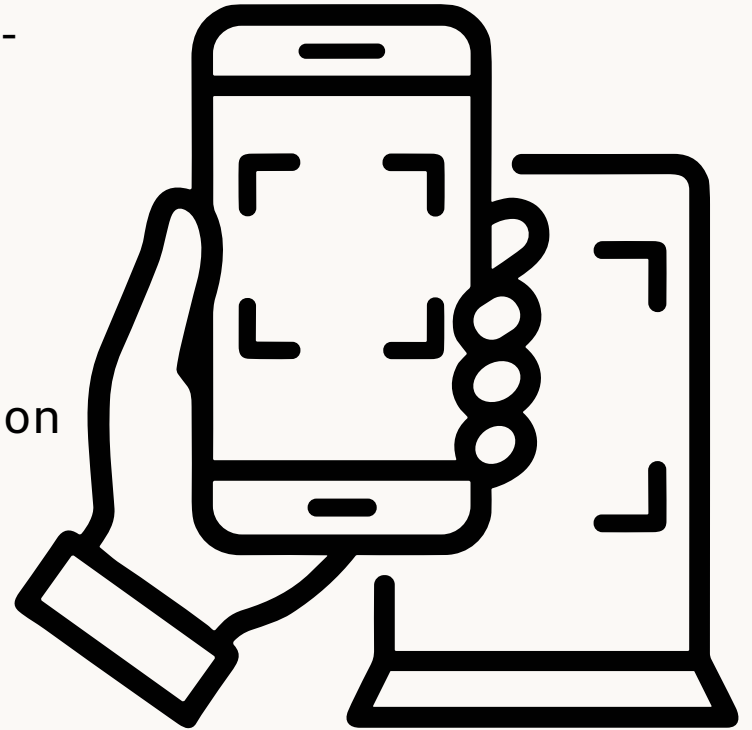

Existing System

- Manual paper-based out-pass system
- Time-consuming approval process
- Risk of fake or duplicate passes
- No centralized digital record
- Difficult monitoring and tracking

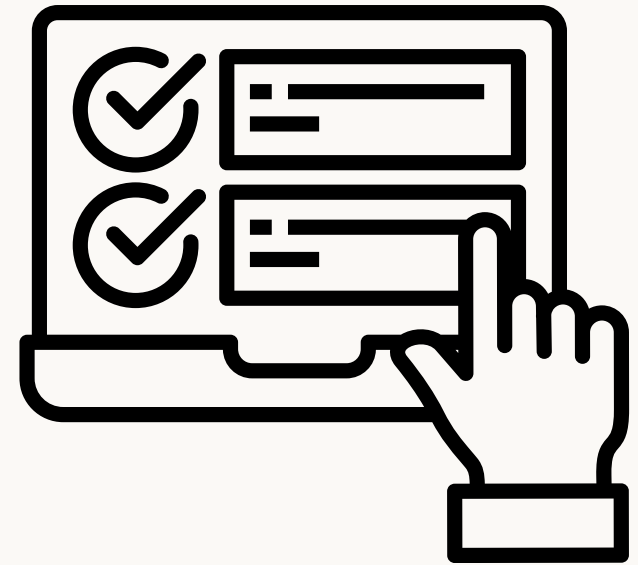

Proposed System

- Development of a web-based digital out-pass management system
- Online permission request and digital approval workflow
- QR code generation for secure verification at entry/exit
- Real-time data storage using MySQL database
- Secure login system with role-based access control

Abstract

- Traditional out-pass systems are manual and time-consuming
- Risk of fake passes and lack of proper record maintenance
- Proposed a digital solution to automate the out-pass process
- Enables online request and digital approval
- Enhances security and transparency through QR-based verification
- Improves efficiency and reduces paperwork

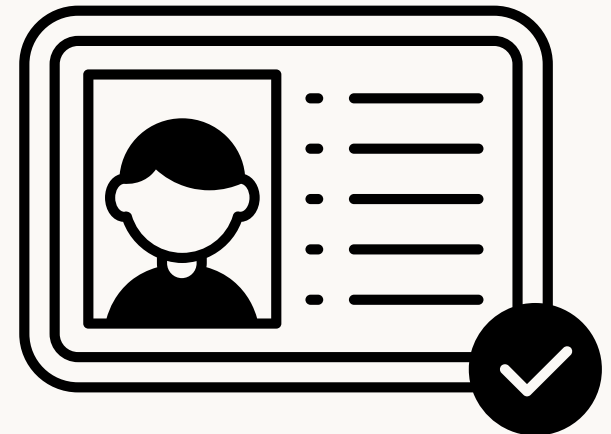

Modules

- User Module - Request and track out-pass
- Authority Module - Approve/Reject requests
- Security Module - QR code verification
- Admin Module - Manage users and reports

Data Set

- User Data (ID, Name, Department, Role)
- Out-Pass Request Data (Date, Time, Reason)
- Approval Status (Approved/Rejected/Pending)
- Entry & Exit Time Logs
- QR Code Token Data

Thank
you
